Arguer's Position - Douglas N. Walton 1985

Douglas N. Walton considers the question of whether the conventions of informal conversation can be articulated more precisely than they are at present. Specifically, he addresses the problem of the fallacy of ad hominem argumentation as it occurs in natural settings. Can rules be formulated to determine if criticisms of apparent hypocrisy in an argument are defensible or refutable? Walton suggests that they can, and ultimately defends the thesis that ad hominem reasoning is not fallacious per se. He carries his analysis to the core of action—theoretic reasoning—by examining a number of specimen arguments. As suggested by the title, the conclusion of ad hominem argument is demonstrated to be relative to the arguer's position. In the appendixes of the book, articles by Gerald McAuliffe and Gordon R. Lowe illustrate vivid and powerful cases in which Walton's contentions are put to the test.

Problems in Argument Analysis and Evaluation - Trudy Govier 2019-11-05

Reasonableness and Effectiveness in Argumentative Discourse - Frans H. van Eemeren 2015-08-27

This volume presents 50 contributions on the themes of reasonableness and effectiveness and their connections, which are central issues in argumentation theory. It discusses van Eemeren’s views on the study of argumentation; the approach to argumentation adopted in pragma-dialectics; pragma-dialectical perspectives on the dialectical and pragmatic dimensions of argumentative discourse; the notion of strategic maneuvering; the pragma-dialectical method of analyzing argumentative discourse; the treatment of fallacies as violations of rules for critical discussion; pragma-dialectical views on context, the role of logic, verbal indicators of argumentative moves and argument schemes; and the process of writing and rewriting argumentative texts. The pragma-dialectical quantitative approach to empirical research on argumentative discourse is illustrated by reporting on selected, illustrative experimental studies, as well as qualitative studies of historical cases.

Strategic Maneuvering in Argumentative Discourse - Frans H. van Eemeren 2010-05-19

In Strategic Maneuvering in Argumentative Discourse, Frans H. van Eemeren brings together the dialectical and the rhetorical dimensions of argumentation by introducing the concept of strategic maneuvering. Strategic maneuvering refers to the arguer’s continual efforts to reconcile aiming for effectiveness with being reasonable. It takes place in all
stages of argumentative discourse and manifests itself simultaneously in the choices that are made from the topical potential available at a particular stage, in adaptation to audience demand, and in the use of specific presentational devices. Strategic maneuvering derails when in the specific context in which the discourse takes place a rule for critical discussion has been violated, so that a fallacy has been committed. Van Eemeren makes clear that extending the pragma-dialectical approach to argumentation by taking account of strategic maneuvering leads to a richer and more precise method for analyzing and evaluating argumentative discourse.

Fallacies-Hans V. Hansen 2010-11-01 Since 1970, when Charles Hamblin issued a challenge for philosophers, logicians, and educators in general to begin work anew in fallacies, a serious literature on fallacies has indeed developed. Part of this literature deals with the theory of what fallacies are; another part of it contains rigorous analyses of particular fallacies. However, most is still not readily accessible to the researcher, teacher, or student of the field. As a result, the best work on fallacies is not finding its way into the classroom, nor is it informing the educational and intellectual experiences available to most college and university students. A major purpose of this book is to make the post-Hamblin work on fallacies available to a wider audience in a single, convenient volume. The editors have brought together for the first time the most important historical writings on fallacy theory, from Aristotle to John Stuart Mill, and the most recent and most important theoretical and pedagogical developments in the field since Hamblin's landmark 1970 book. All but a few of the essays included are new contributions for this anthology, and an extensive annotated bibliography is included for researchers and students of fallacies and fallacy theory.

Knowledge and Persuasion in Economics-Donald N. McCloskey 1994-05-05 Argues that economics is a science, but a human science: a witty guide to the ins and outs of economic philosophy.

A Practical Study of Argument, Enhanced Edition-Trudy Govier 2013-01-01 A PRACTICAL STUDY OF ARGUMENT gives you the tools you need to understand informal logic and formulate a good argument. By focusing on real world examples and including helpful study tools such as exercises with answers, a glossary of common fallacies, chapter summaries, and a book-specific online program (available with the book), A PRACTICAL STUDY OF ARGUMENT, Enhanced Seventh Edition provides you with everything you need to master the material with ease. Available with InfoTrac Student Collections http://gocengage.com/inforac. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Fundamentals of Argumentation Theory-Frans H. van Eemeren 2013-11-05 Argumentation theory is a distinctly multidisciplinary field of inquiry. It draws its data, assumptions, and methods from disciplines as disparate as formal logic and discourse analysis, linguistics and forensic science, philosophy and psychology, political science and
education, sociology and law, and rhetoric and artificial intelligence. This presents the growing group of interested scholars and students with a problem of access, since it is even for those active in the field not common to have acquired a familiarity with relevant aspects of each discipline that enters into this multidisciplinary matrix. This book offers its readers a unique comprehensive survey of the various theoretical contributions which have been made to the study of argumentation. It discusses the historical works that provide the background to the field and all major approaches and trends in contemporary research. Argument has been the subject of systematic inquiry for twenty-five hundred years. It has been graced with theories, such as formal logic or the legal theory of evidence, that have acquired a more or less settled provenance with regard to specific issues. But there has been nothing to date that qualifies as a unified general theory of argumentation, in all its richness and complexity. This being so, the argumentation theorist must have access to materials and methods that lie beyond his or her "home" subject. It is precisely on this account that this volume is offered to all the constituent research communities and their students. Apart from the historical sections, each chapter provides an economical introduction to the problems and methods that characterize a given part of the contemporary research program. Because the chapters are self-contained, they can be consulted in the order of a reader’s interests or research requirements. But there is value in reading the work in its entirety. Jointly authored by the very people whose research has done much to define the current state of argumentation theory and to point the way toward more general and unified future treatments, this book is an impressively authoritative contribution to the field.

**Topical Relevance in Argumentation** - Douglas Walton 1982-01-01 It is a longstanding if not altogether coherent tradition of logic and rhetorical studies that an argument can be incorrect or fallacious in virtue of some proposition in it being “irrelevant”. This monograph clarifies that tradition. Non-classical propositional calculi, including relevance logics and relatedness logics, are juxtaposed against conversational criticisms of irrelevance in natural argumentation, e.g. in parliamentary debates. The object is to see if there is a reasonable way of evaluating criticisms like “That’s beside the point!” or “That’s irrelevant!”.

**Argumentation, Communication, and Fallacies** - Frans H. van Eemeren 2016-07-22 This volume gives a theoretical account of the problem of analyzing and evaluating argumentative discourse. After placing argumentation in a communicative perspective, and then discussing the fallacies that occur when certain rules of communication are violated, the authors offer an alternative to both the linguistically-inspired descriptive and logically-inspired normative approaches to argumentation. The authors characterize argumentation as a complex speech act in a critical discussion aimed at resolving a difference of opinion. The various stages of a critical discussion are outlined, and the communicative and interactional aspects of the speech acts performed in resolving a simple or complex dispute are discussed. After dealing with crucial aspects of analysis and linking the evaluation of argumentative discourse to the analysis, the authors identify the fallacies that can occur at various stages of discussion. Their general aim is to elucidate their own pragma-dialectical perspective on the analysis and evaluation of argumentative discourse, bringing together pragmatic insight concerning speech acts and dialectical insight concerning critical
Philosophy History Sophistry—Dennis A. Rohatyn 1997 Post-modernism believes in nothing, not even unbelief. Hence it is a genial version of nihilism, and the flip side of despair. Like skepticism (from which it descends), it is healthy insofar as it rejects all dogmas; but unhealthy insofar as it substitutes its own, while eating its own essence. This book diagnoses this disease, and offers irony as its cure. What failure of nerve did to Hellenism, strength of character must do for the decline of the best. Humor, laughter, and detachment are the gifts of historical art, and of Socratic science. As we take refuge in the myth of truth, we must realize that there is no truth in myth, and no comfort in illusion, except the lie of immortality.

Crucial Concepts in Argumentation Theory—F. H. van Eemeren 2001 Crucial Concepts in Argumentation Theory is a collection of essays that discuss a series of important issues in the study of argumentation. The essays describe the concepts that are crucial to argumentational research and the various ways these concepts have been approached. The essays explore such issues as points of view, unexpressed premises, argument schemes, argumentation structures, fallacies, argument interpretation and reconstruction, and argumentation in law. Each of the essays provides interested readers with an overview of the literature that can serve as a point of departure for further study.

Considering Pragma-Dialectics—Peter Houtlosser 2014-04-04 Considering Pragma-Dialectics honors the monumental contributions of one of the foremost international figures in current argumentation scholarship: Frans van Eemeren. The volume presents the research efforts of his colleagues and addresses how their work relates to the pragma-dialectical theory of argumentation with which van Eemeren’s name is so intimately connected. This tribute serves to highlight the varied approaches to the study of argumentation and is destined to inspire researchers to advance scholarship in the field far into the future. Replete with contributions from highly-esteemed academics in argumentation study, chapters in this volume address such topics as: *Pragma-dialectic versus epistemic theories of arguing and arguments; *Pragma-dialectics and self-advocacy in physician-patient interactions; *The pragma-dialectical analysis of the ad hominem family; *Rhetoric, dialectic, and the functions of argument; and *The semantics of reasonableness. As an exceptional volume and a fitting tribute, this work will be of interest to all argumentation scholars considering the astute insights and scholarly legacy of Frans van Eemeren.

Manifest Rationality—Ralph H. Johnson 2012-11-12 This book works through some of the theoretical issues that have been accumulating in informal logic over the past 20 years. At the same time, it defines a core position in the theory of argument in which those issues can be further explored. The underlying concern that motivates this work is the health of practice of argumentation as an important cultural artifact. A further concern is for logic as a discipline. Argumentative and dialectical in nature, this book presupposes some
awareness of the theory of argument in recent history, and some familiarity with the positions that have been advanced. It will be of interest to academics, researchers, and advanced undergraduate and graduate students in the disciplines of logic, rhetoric, linguistics, speech communication, English composition, and psychology.

**Academic Constraints in Rhetorical Criticism of the New Testament** - J. David Hester Amador 1999-01-01 Rhetorical criticism promised to bring New Testament studies into a new era that approached the Bible as a document of persuasive discourse. Major proponents of this approach suggested that its potential lies in its democratization of biblical interpretation. To date, that promise has never been fulfilled. The reasons can be found by exploring the rhetoric of these rhetorical critics. Such an exploration uncovers systems of disciplinary constraints and discursive habits that keep rhetoric firmly within traditional units of academic biblical interpretation. The promise of rhetoric can only be fulfilled by shattering all notions of a rhetorical ‘programme’ of biblical interpretation.

**Weaving Self-Evidence** - Claude Rosental 2021-03-09 The development of theorems in logic is generally thought to be a solitary and purely cerebral activity, and therefore unobservable by sociologists. In Weaving Self-Evidence, French sociologist Claude Rosental challenges this notion by tracing the history of one well-known recent example in the field of artificial intelligence—a theorem on the foundations of fuzzy logic. Rosental's analyses disclose the inherently social nature of the process by which propositions in logic are produced, disseminated, and established as truths. Rosental describes the different phases of the emergence of the theorem on fuzzy logic, from its earliest drafts through its publication and diffusion, discussion and reformulation, and eventual acceptance by the scientific community. Through observations made at major universities and scholarly conferences, and in electronic forums, he looks at the ways students are trained in symbolic manipulations and formal languages and examines how researchers work, interact, and debate emerging new ideas. By carefully analyzing the concrete mechanisms that lead to the collective development and corroboration of proofs, Rosental shows how a logical discovery and its recognition within the scholarly community are by no means the product of any one individual working in isolation, but rather a social process that can be observed and studied. Weaving Self-Evidence will interest students and researchers in sociology and the history and philosophy of science and technology, and anyone curious about how scientists work.

**Fact and Fiction in Economics** - Uskali Mäki 2002-12-12 There is an embarrassing polarization of opinions about the status of economics as an academic discipline, as reflected in epithets such as the Dismal Science and the Queen of the Social Sciences. This collection brings together some of the leading figures in the methodology and philosophy of economics to provide a thoughtful and balanced overview of the current state of debate about the nature and limits of economic knowledge. Authors with partly rival and partly complementary perspectives examine how abstract models work and how they might connect with the real world, they look at the special nature of the facts about the economy, and they direct attention towards the academic institutions themselves and how they shape
economic research. These issues are thus analysed from the point of view of methodology, semantics, ontology, rhetoric, sociology, and economics of science.

**The Rise of Informal Logic**-Ralph H. Johnson 2014-07-15 We are pleased to release this digital edition of Ralph Johnson’s The Rise of Informal Logic as Volume 2 in the series Windsor Studies in Argumentation. This edition is a reprint of the previous Vale Press edition with some minor corrections. We have decided to make this the second volume in the series because it is such a compelling account of the formation of informal logic as a discipline, written by one of the founders of the field. The book includes essential chapters on the history and development of informal logic. Other chapters are key reflections on the theoretical issues raised by the attempt to understand informal argument. Many of the papers were previously published in important journals. A number of them were co-authored with J. Anthony Blair. Three of them have appeared only in the present book.

**Arguments about Arguments**-Maurice A. Finocchiaro 2005-07-25 This book brings together essays by one of the pre-eminent scholars of informal logic.

**Constructive Controversy**-David W. Johnson 2015-06-04 Why do people make decisions based on their own perspective without considering alternative points of view? Do differences of opinion enhance or obstruct critical thinking? Is it wise to seek out people who disagree with you and listen to their objections to your conclusions? Focusing on the theory, research, and application of constructive controversy, this book analyses the nature of disagreement among members of decision-making groups, project teams, academic study groups, and other groups that are involved in solving problems. Johnson demonstrates that this theory is one of the most effective methods of enhancing creativity and innovation, decision making, teaching, and political discourse. The book includes entertaining and intriguing examples of how constructive controversy has been used in a variety of historical periods to advance creativity, achieve innovations, and guide democracies. It will be welcomed by students in the fields of social psychology, management/business studies, education, and communication studies.

**The Discourses of Science**-Marcello Pera 1994-12-15 Rather, science is a three-way interaction among nature, the investigator, and a questioning community which, through the process of attack, defense, and dispute, determines what science is. Rhetoric, then, understood as the practice of scientific argumentation, is an essential element in the constitution of science.

**Historical Foundations of Informal Logic**-Douglas Walton 2016-12-05 In just the last twenty years there has arisen a strong interest, especially among teachers of logic at the universities, in teaching techniques of applied logical reasoning and critical thinking. Many universities are now stressing these skills at an introductory level, and to meet the need, informal logic has begun to form and grow as a discipline in its own right. Like all subjects,
it helps us to understand it if we can situate it in a context of historical development. This collection of essays provides the readings required to understand the development of a subject whose historical origins have been so far little studied. Many of the chapters are written by scholars in philosophy and speech communication who are themselves leading contributors to the subject, and their contemporary views throw light on how these earlier writers have influenced their thinking. This dimension gives an added interest to the essays, and indicates the way informal logic is currently evolving and seeking out its ancient historical origins.

**Pondering on Problems of Argumentation**-Frans H. van Eemeren 2009-02-11 Pondering on Problems of Argumentation is a collection of twenty essays brought together for anyone who is interested in theoretical issues in the study of argumentation. This collection of papers gives the reader an insightful and balanced view of the kind of theoretical issues argumentation theorists are currently concerned with. Because most of the perspectives on argumentation that are en vogue are represented, this volume provides a multidisciplinary and even interdisciplinary outlook on the current state of affairs in argumentation theory. Some of the contributions in Pondering on Problems of Argumentation deal with problems of argumentation that have been recognized as theoretical issues for a considerable time, like the problems of fallaciousness and identifying argumentation structures. Other contributions discuss issues that have become a focus of attention only recently or regained their prominence, such as the relationship between dialectic and rhetoric, and the strategic use of the argumentative technique of dissociation. In five separate sections papers are included dealing with argumentative strategies, problems of norms of reasonableness and fallaciousness, types of argument and argument schemes the structure of argumentation and rules for advocacy and discussion.

**The Consequences of Economic Rhetoric**-Arjo Klamer 1988 The papers in this volume are drawn from a recent conference at Wellesley College for both theoretical and applied economists, which explored the consequences of rhetoric and conversation within the field of economics.

**The Reflexive Thesis**-Malcolm Ashmore 1989-08-02 This unusually innovative book treats reflexivity, not as a philosophical conundrum, but as a practical issue that arises in the course of scholarly research and argument. In order to demonstrate the concrete and consequential nature of reflexivity, Malcolm Ashmore concentrates on an area in which reflexive "problems" are acute: the sociology of scientific knowledge. At the forefront of recent radical changes in our understanding of science, this increasingly influential mode of analysis specializes in rigorous deconstructions of the research practices and textual products of the scientific enterprise. Through a series of detailed examinations of the practices and products of the sociology of scientific knowledge, Ashmore turns its own claims and findings back onto itself and opens up a whole new era of exploration beyond the common fear of reflexive self-destruction.
Empirical Logic and Public Debate - Erik C. W. Krabbe 1993

Empirical Logic and Public Debate supplies a large number of previously unpublished papers that together make up a survey of recent developments in the field of empirical logic. It contains theoretical contributions, some of a more formal and some of an informal nature, as well as numerous contemporary and historical case studies. The book will therefore be attractive both to those who wish to focus upon the theory and practice of discussion, debate, arguing, and argument, as well as to those readers who are primarily interested in applications to a particular field, such as ethics, political philosophy, feminist philosophy, or the history of philosophy.

Pragmatic Analysis of Political Data - Fareed Hameed Al-Hindawi 2016-11-17

This book tackles various pragmatic issues which are manipulated by politicians in diverse contexts where the principle of being honest is less important than fulfilling their goals. These issues range from Irony to Impoliteness, Deception, Diplomacy, Fallacy, and Political Accusations. Besides, it reveals what pragmatic strategies are appealed to by those politicians to win over their opponents or convince their audience. Revealing those strategies is done by pragmatic analytical models which are applied to verbal and nonverbal data. Thus, the book can be useful to politicians, pragmaticians, and applied linguists. Additionally, the book is indispensable to researchers interested in pragmatics as it suggests different approaches about how to build pragmatic analytical models and how to use them to analyze political data or any other kind of data.

Informal Logic - Douglas N. Walton 1989-07-28

This is an introductory guide to the basic principles of constructing good arguments and criticizing bad ones. It is nontechnical in its approach, and is based on 150 key examples, each discussed and evaluated in clear, illustrative detail. The author explains how errors, fallacies, and other key failures of argument occur. He shows how correct uses of argument are based on sound argument strategies for reasoned persuasion and critical questions for responding. Among the many subjects covered are: techniques of posing, replying to, and criticizing questions, forms of valid argument, relevance, appeals to emotion, personal attack, uses and abuses of expert opinion, problems in deploying statistics, loaded terms, equivocation, and arguments from analogy.

Rhetoric and Politics - Maria Załęska 2011-10-18

Paradoxically, the term 'rhetoric' functions nowadays both as a name of an antique, even obsolete framework of research and as a fashionable buzzword that entails virtually any form of persuasive communication. Reflecting a growing scholarly interest in political discourses, this volume offers systematic, theoretically grounded insights into the flow of persuasion that constitutes politics today. Authors combine the interest in rhetoric within politics with different disciplinary orientations ...

Courage, a Philosophical Investigation - Douglas N. Walton 1986-01-01
Case Studies in Linguistic Pragmatics-Martti Juhani Rudanko 2001 The six case studies presented here fall into three distinct groups. They examine the application of speech act theory to Shakespearean drama, consider 18th-century Congressional debates from the perspective of fallacy theory in informal logic, and focus more narrowly on applications of linguistic pragmatics. Specific topics include types and functions of unpleasant verbal behavior in Shakespeare's Coriolanus and Timon of Athens, promises and their contexts in Coriolanus, efforts to block the Bill of Rights in 1789, collocational coloring and electronic corpora, and contexts of phonologically null objects in object control structures in English and in Finnish. c. Book News Inc.

Commitment in Dialogue-Douglas Walton 1995-08-10 This book develops a logical analysis of dialogue in which two or more parties attempt to advance their own interests. It includes a classification of the major types of dialogues and a discussion of several important informal fallacies. The authors define the concept of commitment in a way that makes it useful in evaluating arguments. In traditional logic, a proposition is either true or false, and that is the end of it. In this new framework, an arguer can be held to his or her commitments in some cases, but in other cases, he or she can retract them without violating any rule of the dialogue. Commitment in Dialogue studies the conditions under which commitments should be held or may be retracted within an argument.

In Defense of Polemics-Ruth Amossy

Fallacies and Judgments of Reasonableness-Frans H. van Eemeren 2009-08-05 In Fallacies and Judgments of Reasonableness, Frans H. van Eemeren, Bart Garssen and Bert Meuffels report on their systematic empirical research of the conventional validity of the pragma-dialectical discussion rules. The experimental studies they carried out during more than ten years start from the pragma-dialectical theory of argumentation developed at the University of Amsterdam, their home university. In these studies they test methodically the intersubjective acceptability of the rules for critical discussion proposed in this theory by confronting ordinary arguers who have not received any special education in argumentation and fallacies with discussion fragments containing both fallacious and non-fallacious argumentative moves. The research covers a wide range of informal fallacies. In this way, the authors create a basis for comparing the theoretical reasonableness conception of pragma-dialectics with the norms for judging argumentative moves prevailing in argumentative practice. Fallacies and Judgments of Reasonableness provides a unique insight into the relationship between theoretical and practical conceptions of reasonableness, supported by extensive empirical material gained by means of sophisticated experimental research.

Controversy and Confrontation-Frans H. van Eemeren 2008-12-17 The essays that are collected in Controversy and Confrontation provide a closer insight into the relationship between controversy and confrontation that deepens our understanding of the functioning of argumentative discourse in managing differences of opinion. Their authors stem from two
backgrounds. First, the controversy scholars Dascal, Marras, Euli, Regner, Ferreira, and Lessl discuss historical controversies in science, both from a theoretical and an empirical perspective; Saim concentrates on a historical controversy; Fritz provides a historical perspective on controversies by analyzing communication principles. Second the argumentation scholars Johnson, van Laar, van Eemeren, Garssen and Meuffels address theoretical or empirical aspects of argumentative confrontation; Aakhus and Vasilyeva examine argumentative discourse from the perspective of conversation analysis; Jackson analyzes argumentative confrontation in a recent debate between scientists and politicians. Last but not least, two contributors, Kutrovátz and Zemplén, make an attempt to bridge the study of historical controversy and the study of argumentation.

The Routledge Pragmatics Encyclopedia-Louise Cummings 2010-04-05 First Published in 2009. Routledge is an imprint of Taylor & Francis, an informa company.

Canadian Philosophical Reviews- 1985

Physician-patient Decision-making-Douglas N. Walton 1985 Walton offers a comprehensive, flexible model for physician-patient decision making, the first such tool designed to be applied at the level of each particular case. Based on Aristotelian practical reasoning, it develops a method of reasonable dialogue, a question- and-answer process of interaction leading to informed consent on the part of the patient, and to a decision--mutually arrived at--reflecting both high medical standards and the patient's felt needs. After setting forth his model, he applies it to three vital ethical issues: acts of omission, the cessation of treatment, and possible side effects of treatments. In the final chapter, Walton shows how his method functions in light of the real-life complexities of the clinical encounter and how it bears on ethical questions concerning health-care policy, attitudes toward treatment and toward the medical profession, reasonableness of expectations, and the setting of realistic goals of treatment.

Poznan Studies in the Philosophy of the Sciences and Humanities- 1993

Rationality in Thought and Action-Martin Tamny 1986 This collection of original essays examines the controversy over and attacks on rationality in the methodologies of the humanities and the physical and social sciences. These essays represent the thinking of a wide variety of philosophers, psychologists, historians, classicists, and economists about the role of rationality in thought and action. Reflecting the differing perspectives of their authors' disciplines, as well as the centrality of rationality to those disciplines, they are important additions to a debate that has been going on for some twenty years. Beginning with an introductory essay in which K.D. Irani covers the various ways in which rationality can be approached, the body of the book is divided into five sections dealing with various aspects of the issue. Respectively, they are concerned with rationality as it relates to ethical and social thought and action: general scientific thought and the particular disciplines of
economics, history, and law; the analytic and hermenutic approaches to communications and learning; and the contrasting classical traditions of ancient Greece and China. In the final section, two differing theories concerning the nature of rationality itself are presented. A list of suggested further readings completes the volume.
