Invasive species - Wikipedia
An invasive species is an introduced organism that becomes overpopulated and negatively alters its new environment. Although their spread can have beneficial aspects, invasive species adversely affect the invaded habitats and bioregions, causing ecological, environmental, and/or economic damage. Sometimes the term is used for native species that become invasive within certain ...

Natural climate solutions for the United States | Science
Limiting climate warming to <2°C requires increased mitigation efforts, including land stewardship, whose potential in the United States is poorly understood. We quantified the potential of natural climate solutions (NCS)—21 conservation, restoration, and improved land management interventions on natural and agricultural lands—to increase carbon storage and avoid ...

Chapter 4 : Land Degradation — Special Report on Climate
In forest types with rare stand-replacing disturbances, the concept of ‘intact’ or ‘primary’ forest has been used to define the initial condition (Potapov et al. 2008 460) but applying a single metric can be problematic (Bernier et al. 2017 461). Moreover, forest types with

Pasture and Hay for Horses - Penn State Extension
Aug 01, 2005 · People used to think that horses should not be fed legume hay because it would cause digestive disorders. But research has dispelled this notion. Respiratory or digestive disturbances associated with feeding hay are more likely caused by dust and mold than by mixtures. Straight legume hay or legume-grass mixed hay is a desirable feed if cut early.
